

The Challenge.

Design a presentation timer with sections for mobile or desktop. Highlight the current section and show which ones are coming next.

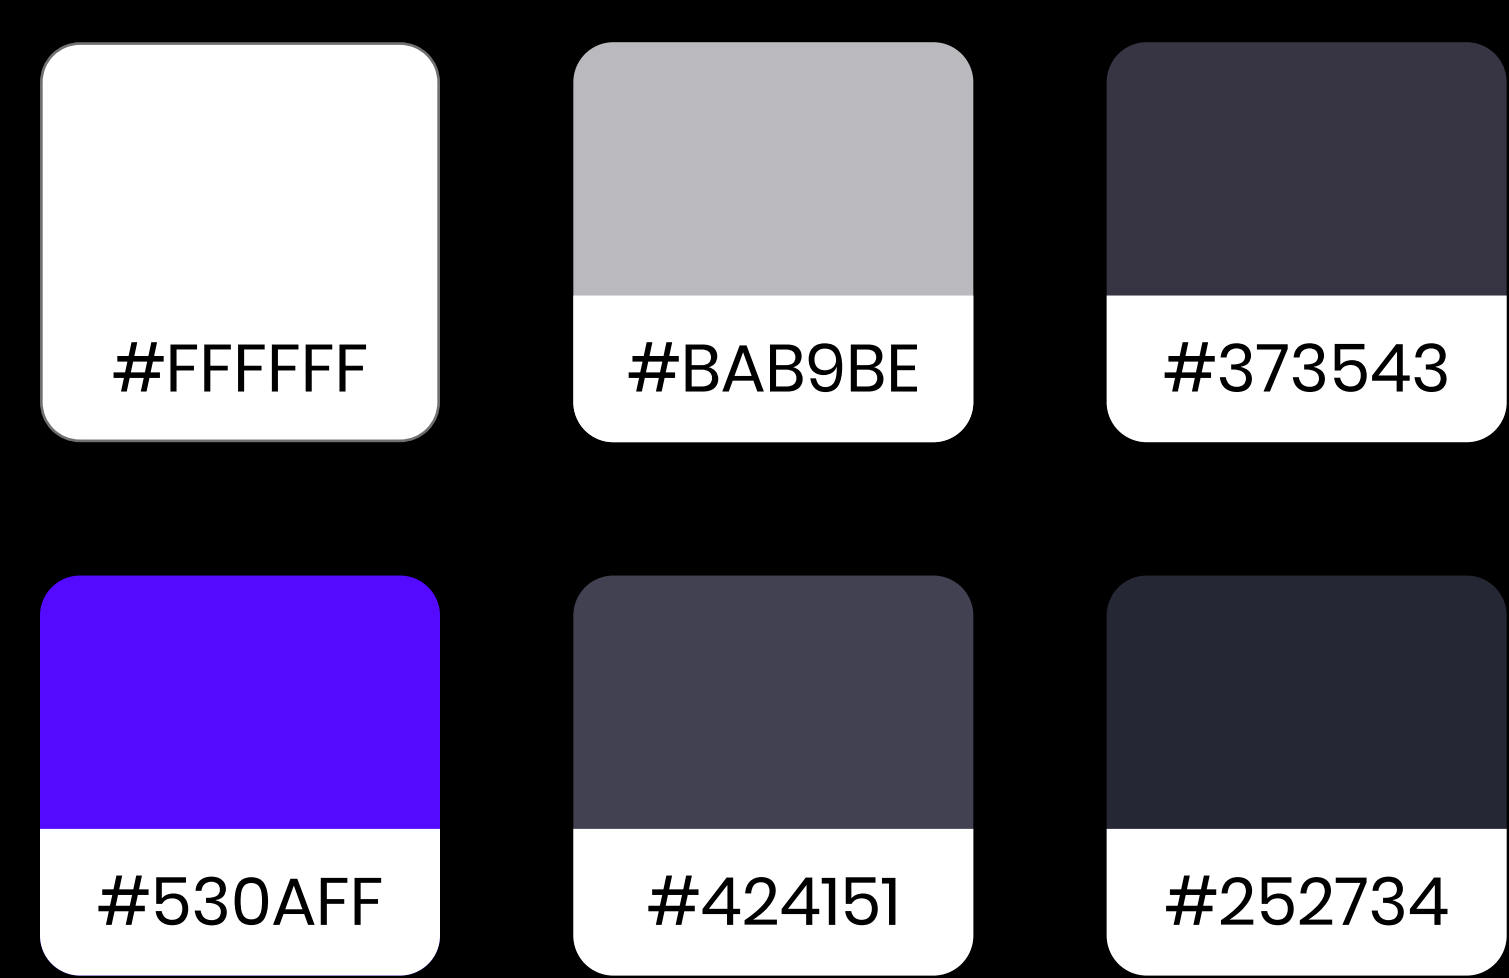

Existing Tech.

What makes this timer better than existing timers? The section system is completely unique and useful for more specific presentation time management rather than a simple timer.

Color Palette.

Dark is friendly for users even when they're using the app for last minute practicing! Background not completely black for a more soft look.

User Personalization.

Let users feel more at home in the home screen. Give users full control of their presentation with little effort. Intuitive design means users don't have to make a time investment to try it out!

Think Fast!

Let users make changes on the go. In case of an emergency, users can to add, delete, edit, or swap sections in the middle of a presentation. They can also pause, restart the section, go back, or start over.

Congrats!

Give users a sense of accomplishment for finishing their presentation – they deserve it!
